Data Sheet

SPUR Liquid Farmer

Features: SPUR Liquid Farmer can be used as a cleaner, bleacher and reducer, depending on the respective dilution.

A weaker dilution leads to its function as cleaner of silver residue in developing machines and developing tanks as well as a strong bleaching effect, a medium dilution entails a weaker bleaching effect, which for certain emulsions can already be used for reducing, a stronger dilution still results in an acceptable reducing effect with certain emulsions. Whichever dilution is to be used for what purpose, needs to be investigated by tests. The scope of dilution recommended is as follows:

1 part A + 1 part B + 8 parts of water = weak dilution

1 part A + 1 part B + 18 parts of water = medium dilution

1 part A + 1 part B + 28 parts of water = strong dilution

You can certainly prepare any dilution within this recommended scope. **Note that the working solution, once prepared, does not keep very long (ca. 30 minutes).**
